#### Tagging (System vs Energy Actions)

Duwayne Blackwood Senior Performance Analyst

#### Timescales

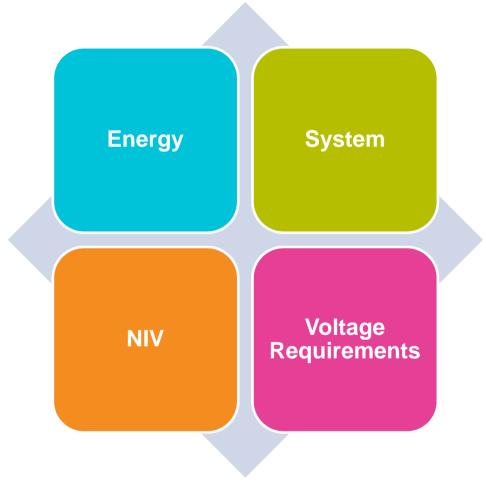

#### **Tagging Process**

- Tagging is the act of categorising system related costs.
- We do this to minimise pollution of *energy* cash-out price
- This better provides the cost of balancing energy
- The tagging process of BOAs is ex-post, whereas tagged trades are ex-ante

## Tagging

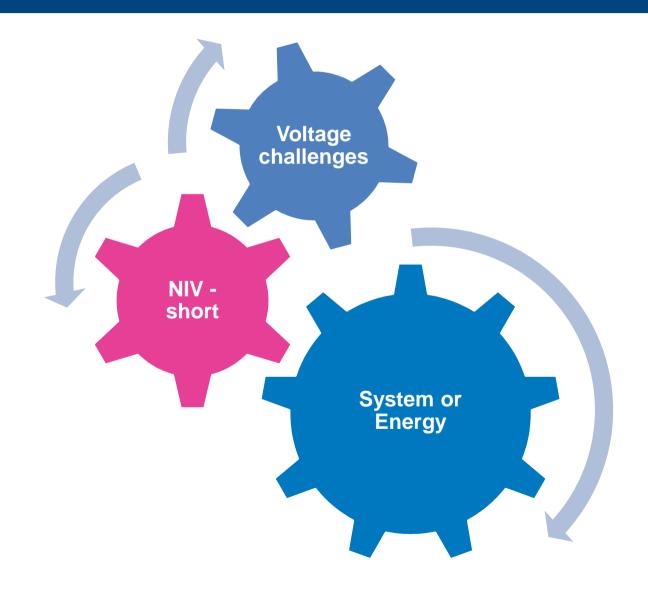

#### Challenges

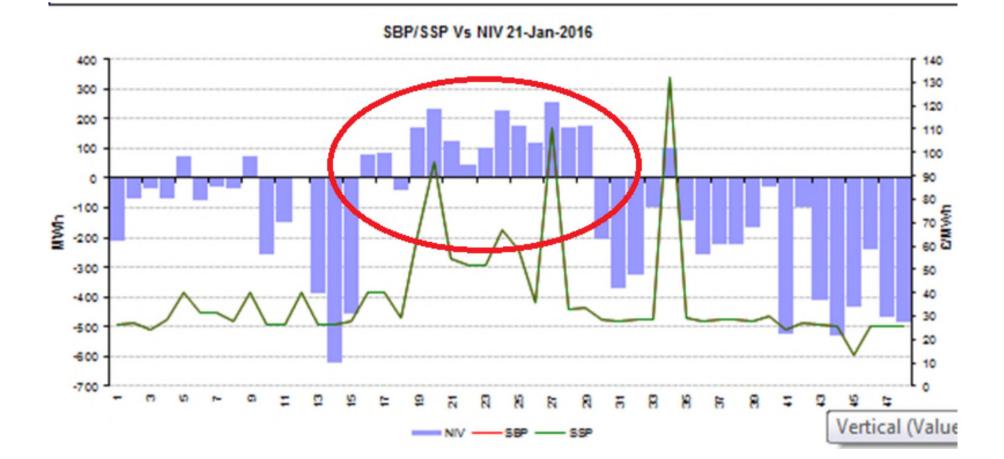

Optimisation across longer time scales

Plant dynamics: Flexible and inflexible generation

## Tagging Explained

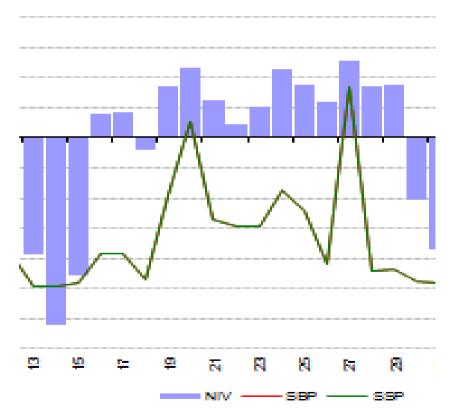

### **Tagging Explained**

#### **Tagging Explained**

## nationalgrid

#### SBP/SSP Vs NIV 21-Jan-2016

- Take actions for NIV first?
- Take actions for system security first?

BOTH

### **Tagging Explained**

# nationalgrid

#### **Forward Trades:**

Actions on IFA & Britned over SP18 - 38

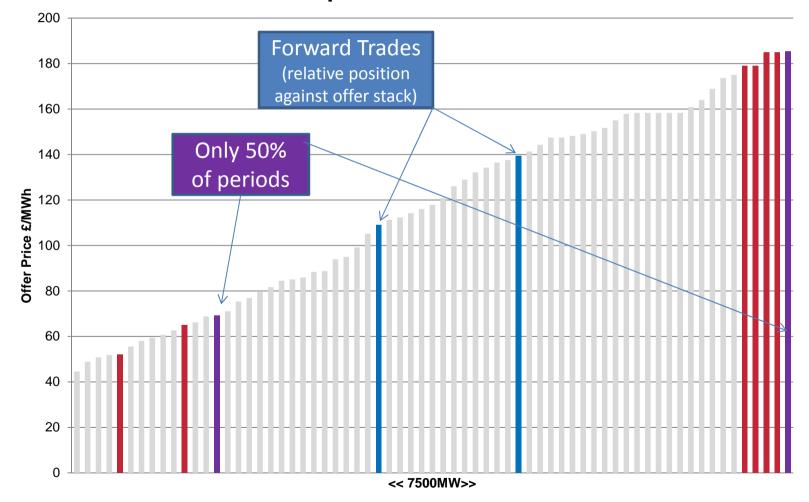

#### **BM Actions:**

Date:	21-Jan-16	Settlement Period																				
BMUID	BidOffer	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29
LONDON-GEN	0			2	2														2	3	2	2
LONDON-GEN	0						3	4	3	3	4	6	5	4	4	5	4	3	2	1		
LONDON-GEN	0								1	2	1	3	4	11	10	9	4	2	2	1	1	1
LONDON-GEN	0											1	2	3	1							
LONDON-GEN	0											1	2	3	1							
LONDON-GEN	0															1	2	2	2	2		
LONDON-GEN	0	1	1	1	1	3	3															
LONDON-GEN	0	1	1	1	1	3	8	5	2	1												
LONDON-GEN	0											1	2	3	2							
LONDON-GEN	0											1	2	3	2							

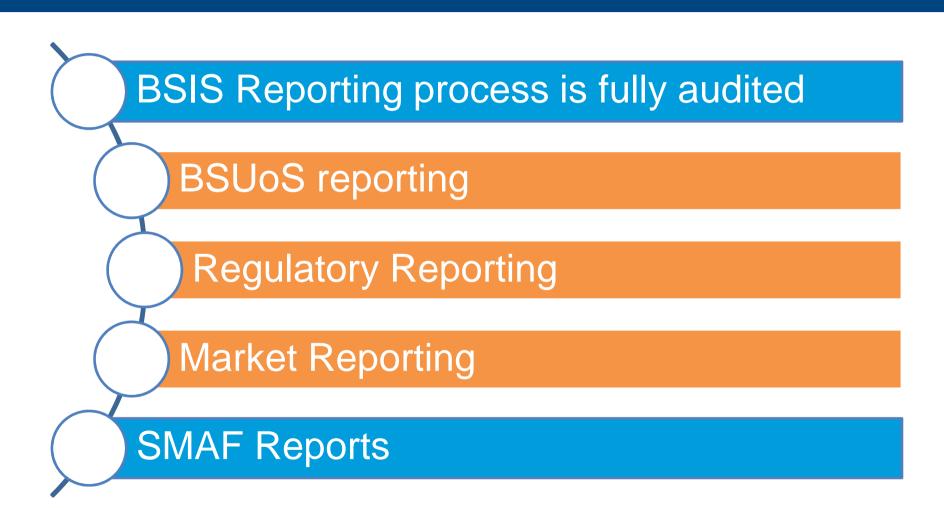

- System security solved
- NIV solved
- MW Dispatch most economical
