The forecast is meant as a guide and does not take into account action on pump storage or interconnectors which will be done as required in control room timescales.

The RAG for the 2-14 National level is based on a surplus higher than 1000MW for green, between 500 and 1000MW for amber and less than 500MW for Red it includes a MW level away from the risk.

The RAG for the 2-14 Scottish level is based on a surplus higher than 400MW for green, between 0 and 400MW for amber and below 0MW for Red it includes a MW level away from the risk.

The weekly 2-52 RAG is the load factor of wind required to cause an NRAPM and then the % probability of getting this load factor. The forecast can be read as the probability of an NRAPM for each week in with yellow for between 5% and 20% and Red for over 20%.
