Updated

# BM Life Extension Project

## *What we are doing:*

The existing hardware is at end of life

1<sup>st</sup> phase to enable future development

Minimal disruption to market participant

## *What we require from Market Participants:*

Support in verification of connectivity to your systems

Balancing Capability in Electricity Network

Control Centre

Balancing Mechanism  
System (BM)

EBS

**Hardware refresh required - identified though routine asset health maintenance**

**No visible changes for users or external parties**

**No changes to how BM interacts with other systems**

Completed	Required work
New production configuration (ip addresses) communicated and tested with market	Verification through checking EDT /EDL continued operations

# EDT / EDL Connectivity Checks Required

We need each EDT market participant to perform the following test:

1. Make a FTP connection from your production system(s) to the first IP address - using the supplied login details (these will be provided in a subsequent communication)
2. FTP a text file containing your company name, name of system sending the file, date and time of test. You will need to do this for all production systems
3. Repeat steps 1 and 2 for the second IP address
4. Once testing completed, please advise NGESO

NGESO has allocated a window from Wednesday 20 March until Friday 26 April 2019 for these tests to be conducted, but please consider conducting these earlier rather than later within the test window. This is to ensure that any failures can be investigated by your technical teams, corrected and retested before the 26th April deadline.

NGESO will be undertaking EDL connectivity checks during planned BM EDL outage windows from these alternate IP addresses. During these windows, NG will attempt to connect /disconnect to all EDL clients. Participants are not expected to do anything except to allow this connection to occur.

The EDL test windows are proposed as follows. During these periods, EDL connectivity will be disabled from the current production BM system

Thu 11th April 2019 – Checks with Primary System

Thu 25th April 2019 – Checks with Secondary System (during the planned BM outage)

Thu 9th May 2019 – Contingency Final verification window only

In between the above test windows, NGESO will plan to work with you to resolve any issues discovered.

# EBS Update

- EBS is being used as a part of a hybrid set of balancing systems within Control. It provides the plan schedule for a period 8 hours before real time
- NGENSO have reached a contractual agreement with our supplier and EBS will remain a part of the Balancing Capability for the coming years
- EBS will be updated alongside BM to meet the needs of the Wider Access and TERRE requirements. This will be delivered as a combined solution
- To support the operating model required to deliver TERRE and Wider Access, EBS will move to scheduling up to four hours before real time
- NGENSO have set up a Future Balancing Programme to address the emerging regulatory changes (MARI etc) and to determine appropriate tools, capabilities and operating model to support the increasing level of market driven change.

# Pan- EU Balancing Platform: LIBRA

- *Exchange of RR Product*
- *Developed by Project TERRE*

- **TSO-TSO Model-** BSPs participate via their TSO
- **Marginal Pricing (pay-as-clear)** – One price (unless borders are congested)
- **Replacement Reserve Product**
  - Scheduled Activation
  - 30min Full Activation Time
  - 15min Blocks
- **One auction per hour** – 4 blocks cleared per auction

# TERRE – Participating Countries

Full Members	Observers	Interest	Non-members
GB	Greece	Croatia	Bulgaria
France	Czech Republic	Denmark	Poland
Italy	Norway	Finland	Romania
Portugal		Sweden	
Spain			
Switzerland			

Hungary have  
withdrawn  
as a non member

# What does TERRE mean for GB?

For ESO	For Market Participants
<ul style="list-style-type: none"><li>• New balancing auction (similar to Day Ahead arrangements), taking place after gate-closure</li><li>• additional process for submitting offers to TERRE in parallel with Balancing Mechanism processes.</li><li>• An additional tool to conduct coarse energy balancing actions etc using 15 min blocks of energy.</li><li>• Access to additional flexibility such as “non-BM” units and across borders for energy balancing.</li><li>• Estimated reduction in balancing costs of €13 million for GB</li></ul>	<ul style="list-style-type: none"><li>• New international market for GB market participants to compete in. Increased liquidity and opportunities to offer flexibility.</li><li>• Opportunity to compete in two markets in parallel.</li><li>• Introduction of new pay-as-clear pricing approach in parallel with pay-as-bid BM arrangements</li><li>• Removal of barriers to entry for “non-BM participants” and small embedded generation sources.</li></ul>

# Wider Access to the Balancing Mechanism (BM)

## Removing barriers to participating in the Balancing Mechanism

Improving existing routes to market (Aggregation via supplier)

Creating new routes to market (Independent aggregation)

Improving systems and processes

## Access via Virtual Lead Party (VLP)

- New type of Market Participant
- Will be able to create secondary BMUs for individual or aggregated units
- Solely for the provision of Balancing services to the SO

# Role of ELEXON as BSC administrator

ELEXON provides essential energy market infrastructure

## Code Administration

- Industry rules management
- Trusted critical friend
- Dedicated customer support /training

## Code Operation

- 24/7 settlement
- Design/change implementation
- Assurance services
- Dedicated customer support/training

## Policy Delivery Support

- Impartial, expert advice/guidance
- Market scanning
- Providing support to deliver policy outcomes

We administer the Balancing and Settlement Code – rules governing the ‘meter to bank’ process, including imbalance prices calculation every half hour.

ELEXON – trusted, reliable independent market experts

We serve market participants including:

**462**

~26 Distributors, interconnectors

~110 Traders

~120 Generators

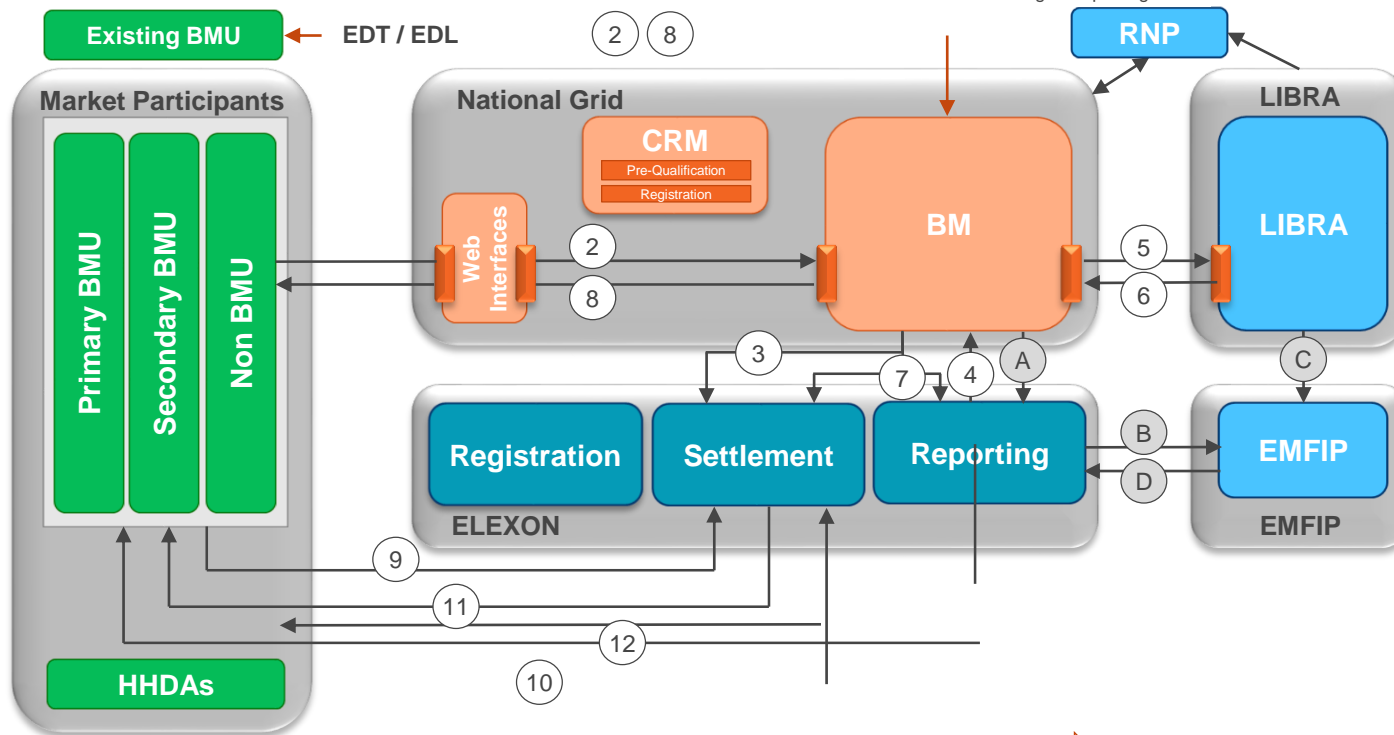

~171 Suppliers

We also calculate, collect & distribute payments to CfD generators and Capacity Market providers

## ➤ A New Energy Scenario

- A changing energy system - **increased renewables, greater decentralisation, new energy mix, emerging technologies**, brings new challenges in balancing the GB electricity system

## ➤ Enabling a Wider Access to the Balancing Mechanism

- NGESO has a key role to play in **facilitating the regulatory changes** by enabling the participation to the Balancing Mechanism entry for **small** and **aggregated units**:
  1. **Improving existing routes to market**
  2. **Creating new routes to market**
  3. **Improving IT systems**

## ➤ Delivery Timeline

[Wider Access to the Balancing Mechanism Roadmap](#)

# What? - High Level Solution Overview

## ➤ How the IT systems will be improved?

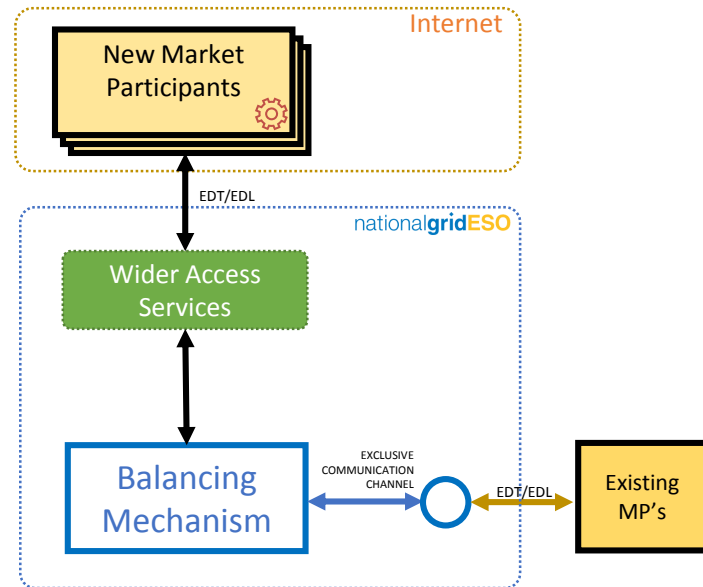

- A **new set of API services** (Application Programming Interface) will be implemented to extend **EDT** (Electronic Data Transfer) and **EDL** (Electronic Dispatch Logging) through the Internet

## ➤ What NGESO and MPs will have to implement?

Owner	EDT	EDL	Health
nationalgridESO	1. Submission	2. Redeclaration 3. Wait / Ack/ Acc/ Rej of NGESO Instruction	4. API's Health
 Market Participant	1a. ACK 1b. Acc/Rej	2a. Ack/Acc/Rej of Redeclaration 3a. NGESO Instruction	5. API's Health

(Ack - Acknowledgement, Acc – Acceptance; Rej – Rejection)

- (NGESO) A **set of interfaces** to **consume** the APIs exposed by new Market Participant
- (Market Participant) A **set of interfaces** to **consume** the APIs exposed by NGESO

### Key

EDT & EDL Interfaces (existing MP ↔ BM)  
[No impact]

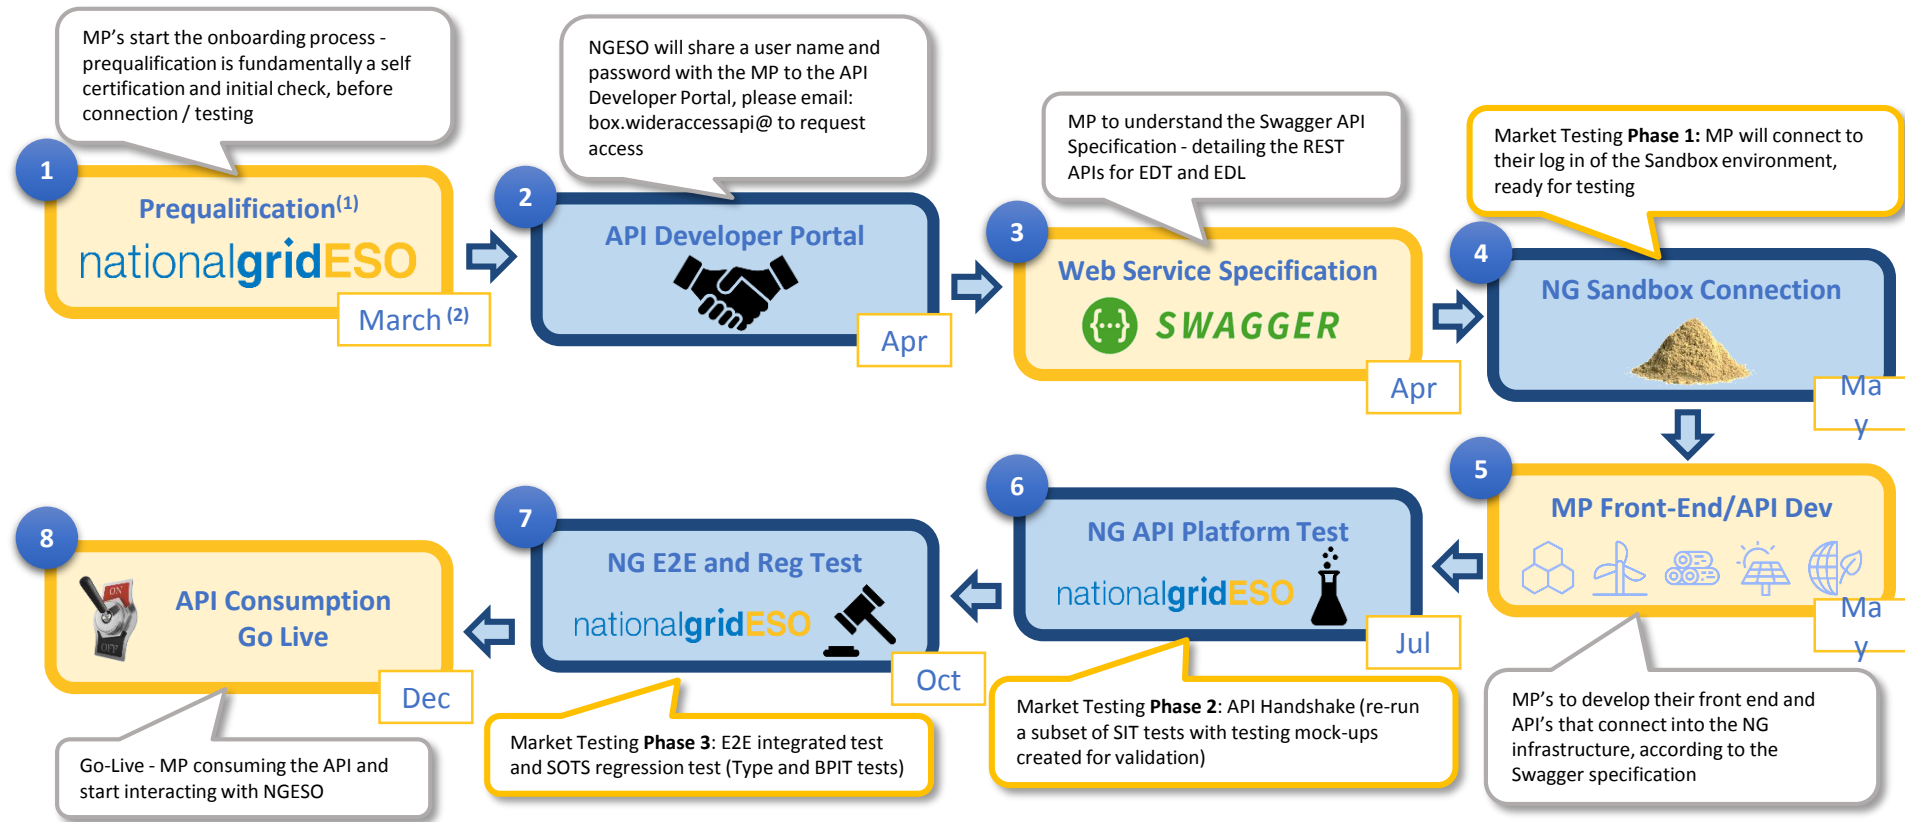

EDT & EDL (new MP)  
[NGESO responsibility]

Services deployed in the new Market Participant infrastructure (NG → MP)  
[Market Participant responsibility]

# How? - Market Participant Journey

<sup>(1)</sup> Software providers will not go through prequalification but will require alternative Business validation

<sup>(2)</sup> All dates are from then onwards

MP Independent Activity

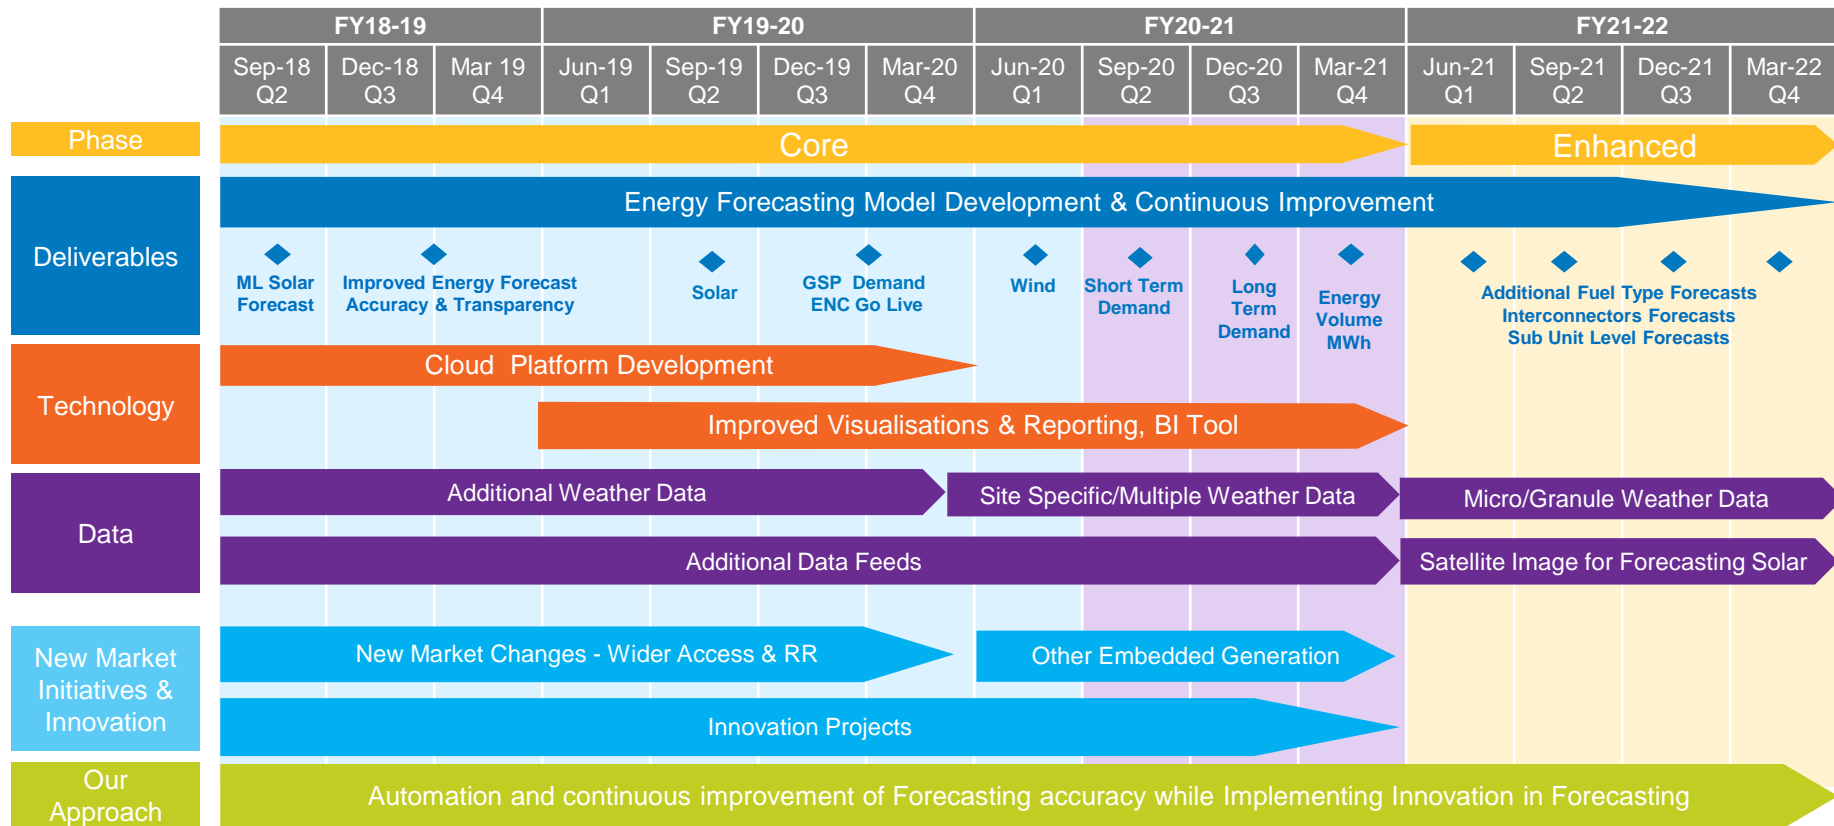

NG Facilitated Activity

# Energy Forecasting Strategic Project – Roadmap

# Platform for Energy Forecasting - Roadmap

# Energy Forecasting has delivered value to consumers

## VALUE TO CONSUMERS

### ACCURACY

Accurate forecasts will allow market participants to better adjust their generation/consumption positions ahead of real time.

### FREQUENCY

More frequent forecasts will allow market participants to better adjust their positions closer to real time.

### TRANSPARENCY

Easy to understand and more accessible forecasting data will lead to more efficient markets and potentially remove barriers to entry.

## DELIVERABLES DURING 2018/19

IMPROVED ON BOTH SO FORWARD PLAN FORECASTING METRICS TO DRIVE ACCURACY:

- DA DEMAND (9%)
- DA WIND BMU FORECASTS (4%)

FIRST MACHINE LEARNING MODEL (PV FORECASTING)

IMPROVED & INCREASED WEATHER FORECAST DATA  
ADDITIONAL DATA FEEDS – ELECTRALINK

INITIATED THE ENERGY FORECASTING STRATEGY PROJECT TO DELIVER NEW FORECASTING CAPABILITIES AND SERVICES.

MAKE ENERGY FORECASTS AND DEMAND DATA MORE ACCESSIBLE VIA A DEDICATED WEBSITE

# Energy Forecasting has promised to deliver value to consumers

## VALUE TO CONSUMERS

### ACCURACY

Accurate forecasts will allow market participants to better adjust their generation/consumption positions ahead of real time.

### FREQUENCY

More frequent forecasts will allow market participants to better adjust their positions closer to real time.

### TRANSPARENCY

Easy to understand and more accessible forecasting data will lead to more efficient markets and potentially remove barriers to entry.

## DELIVERABLES FOR 2019/20

2 METRICS TO DRIVE ACCURACY: DA DEMAND AND DA WIND BMU FORECASTS

PUBLISH FORECASTING STRATEGY PROJECT ROADMAP

PUBLISH HALF-HOURLY PHOTOVOLTAIC (PV) FORECASTS TO MARKET, 24 TIMES A DAY

PUBLISH ADDITIONAL BMU WIND FORECASTS TO THE MARKET

PUBLISH AN ADDITIONAL DAY-AHEAD DEMAND FORECAST UPDATE AT 12:00PM EVERY DAY

MAKE ENERGY FORECASTS MORE ACCESSIBLE VIA A DEDICATED WEBSITE AND APPLICATIONS

# We delivered on all promises made in the Forward Plan

## Improve accuracy of our forecasts (1)

Mobilization of the Demand Forecast Modelling review

### Deliverables

- Initiated the **Energy Forecasting Strategy Project** to deliver new forecasting capabilities and services.
- Project already delivered:
  - **PEF (Platform for energy forecasting)**. First cloud platform to run forecasting models
  - **First machine learning** model (PV forecasting)
  - **Automation** of forecasting reports to the market

## Improve accuracy of our forecasts (2)

Incremental improvements to our demand, wind and solar forecasts

### Deliverables

- Positive step change in demand and wind **accuracy**
- **9%** improvement on DA demand accuracy
- 12% reduction in DA large demand forecasting errors
- **4%** improvement on Wind power forecast accuracy
- **33%** PV modelling error improvement with new ML model

## Publications

Publication of wind generation and demand forecasts.

### Deliverables

- **100%** publications went to market
- **99%** publications were on time
- Results achieved by implementing **Market publications automation**

## 2019

Q2

Q3

- Online Registration
- Pre-Qualification
- Tendering
- Contract Award

Q4

- **EBGL**
- Pre-Qualification
- Transfers
- Asset Mgmt
- Optional Contracts
- DNO Constraints

- PP – Reactive Power
- NBM STOR MVP

- PP – Active Power
- NBM STOR MVP + 1

- **EBGL**
- Transfers
- Asset Mgmt

- STOR
- Fast Reserve
- Fast Frequency Response

## 2020

Q1

- Declarations and Re-Declarations
- Performance Dashboard

Q2

- P354 Compliant

Q3

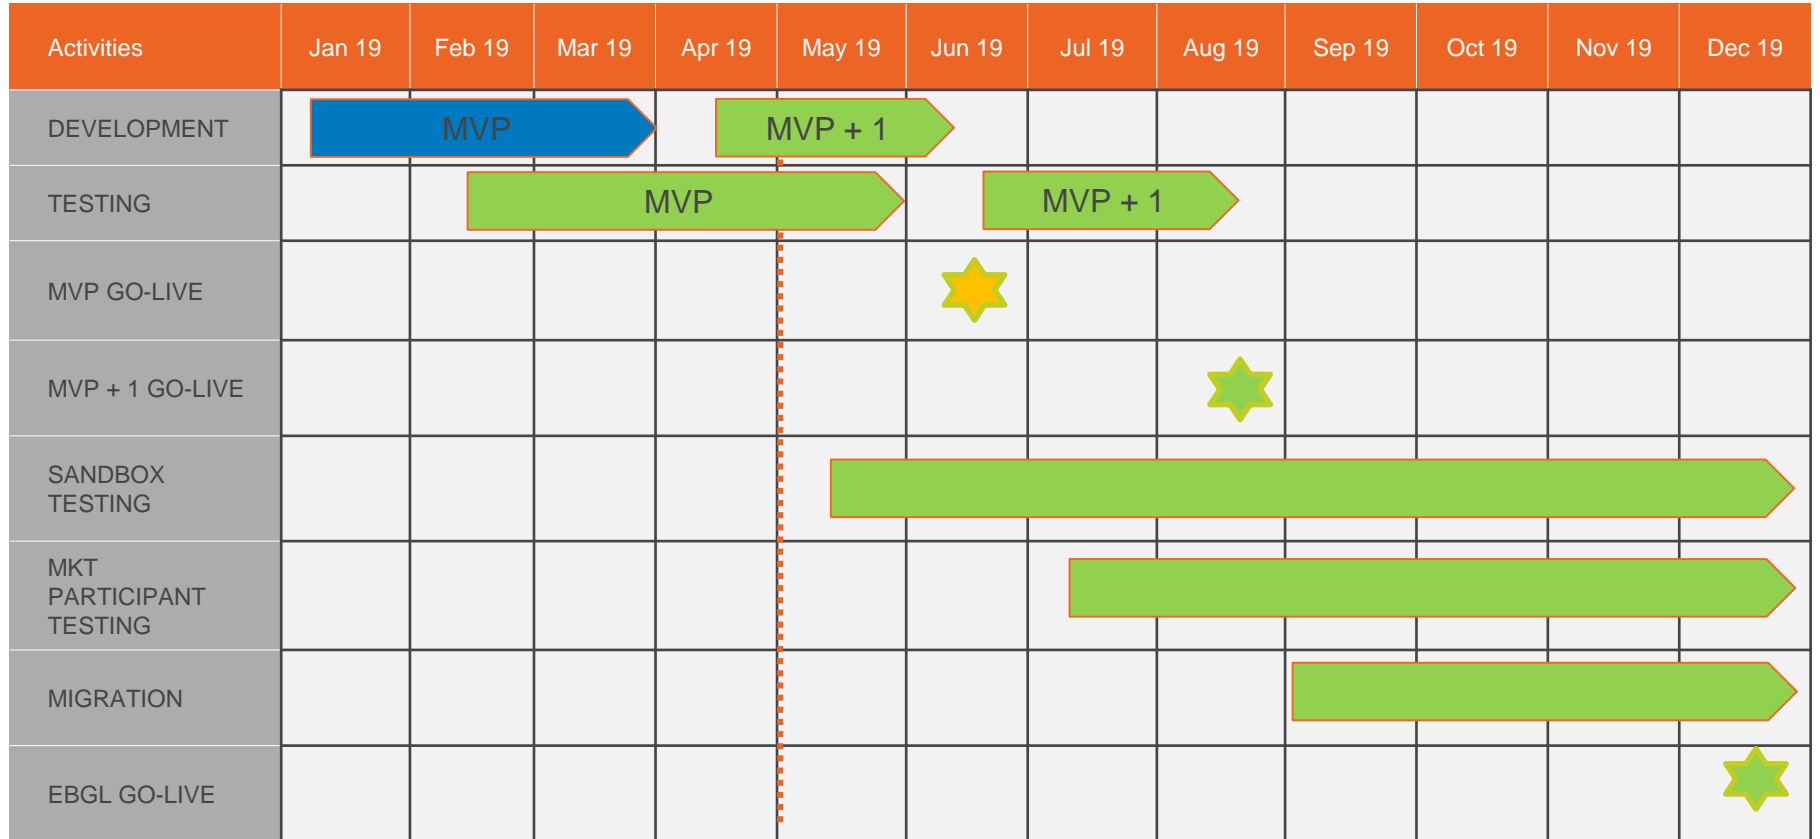

- Service Flexibility
- Demand Turn-up

- Mandatory Frequency Response
- Commercial Frequency Response

- Interconnector specific services
- Default Reactive

- Pumped storage ancillary services
- Black Start
