2	Do you have any other comments on the proposal?	<p>We would welcome more information on the interaction between the specific products available to the TSO and the standard products as envisaged under the Electricity Balancing Guidelines. We are uncertain at this time as to the relative importance of the various products available and the roles that they will play in determining efficient energy and system balancing.</p> <p>In addition, we would welcome more information on relative importance of the Replacement Reserve products envisaged under product TERRE. This will help to inform our role as a provider of balancing services and help to determine our level of participation in this new product procurement process.</p>	<p>NGESO are currently working to understand the details of incorporating the RR product into our balancing strategy.</p> <p>We understand the importance of this for market participants and will work to share further information as soon as we can.</p>
