Go-live confirmation

As previously announced, the Go-live of various NGESO and ELEXON system and process changes for enabling Wider Access (WA) to the GB Balancing Mechanism (BM) will take place this month. The BM will be ready to receive market participants from **Wednesday, 11 December**.

There will be an additional phase of Go-live which will allow us to meet our reporting requirements under the Electricity Balancing Guideline (EBGL) from **Wednesday, 18 December**.

However, as with all of our IT projects which involve updates to our Control Room systems, these changes are dependent on favourable conditions on the system at the time, to allow them to go into the live production environment. There are contingencies in place in case this is not possible on the intended dates.

Market testing

As part of implementation preparations, NGESO has successfully completed a course of testing with an initial group of market participants, who will create their own web-based Application Programming Interfaces (APIs) to provide Electronic Data Transfer (EDT) and Electronic Despatch and Logging (EDL) to NGESO.

Virtual Lead Parties

Ofgem has now approved CUSC Modification Proposal 295: Contractual Arrangements for Virtual Lead Parties (Project TERRE). This allows NGESO to implement this change into the Connection and Use of System Code (CUSC) and enable market participants to accede to the industry codes as Virtual Lead Parties (VLPs).

VLPs can now gain a fuller picture of their commitments and obligations in signing the CUSC. NGESO will implement this into the CUSC shortly.
