Daily Balancing Costs

**Commentary**

The market was mostly long through the day until 5pm and then changed to a short position for the remainder of the day. Demand out turned lower than forecast during the mid morning by 750MW to 1 GW.

BM Actions and trades were required to manage thermal constraints in Scotland. BM Actions were also needed for RoCoF during the morning and interconnectors were traded down for RoCoF overnight. Trades were also carried out for voltage management.
