The market was short in excess of 1600MW over the morning pick-up and in excess of 800MW during the darkness peak. In the morning, STOR in excess of 350MW was run as demand was outturning lower than forecast. Power flow restrictions were in place in Scotland due to planned outages and were solved with bids taken in the BM from the afternoon until the end of the day. Overnight, the voltage levels were managed with a mix of trades and BM actions on generating units, and multiple trades on the interconnectors were undertaken together with some BM actions to mitigate the RoCoF risk.
