

**“Interruption Payment”**

the payment for each day or part thereof of the **Interruption Period** calculated as follows:

1. In the case of a **Relevant Interruption** arising as a result of a **Planned Outage** the higher of:

- A. the £ per MW calculated by reference to the total TNUoS income derived from generators divided by the total system **Transmission Entry Capacity**, in each case using figures for the **Financial Year** prior to that in which the **Relevant Interruption** occurs, this is then divided by 365 to give a daily £ per MW rate; or
- B. the actual £ per MW of an **Affected User** by reference to the tariff in the **Use of System Charging Statement** for the **Financial Year** in which the **Relevant Interruption** occurs divided by 365 to give a daily £ per MW rate.

A or B are then multiplied by:

- a) in the case of an **Affected User** other than an **Interconnector\_Owner** the MW arrived at after deducting from the **Transmission Entry Capacity** for the **Connection Site** the sum of the **Connection Entry Capacity** of the unaffected **BM Units** at the **Connection Site**; and
- b) in the case of an **Affected User** who is an **Interconnector Owner** the MW specified in the **Transmission Entry Capacity** for the **Connection Site**.

2. In the case of a **Relevant Interruption** arising as a result of an **Emergency Deenergisation Instruction**:

- (a) sum equal to the **System Buy Price** as defined in the **Balancing and Settlement Code** for each **Settlement Period** (or part thereof) from the time when the **Emergency Deenergisation Instruction** was issued by **The Company** until the first **Settlement Period** for which **Gate Closure** had not (at the time the **Emergency Deenergisation Instruction** was issued by **The Company**) occurred

multiplied by:

Section 11 following CMP211 Implementation (24<sup>th</sup> January 2013)

- (i) in the case of an **Affected User** other than an **Interconnector Owner** the MW arrived at after deducting from the **Transmission Entry Capacity** for the **Connection Site** the sum of the **Connection Entry Capacity** of the unaffected **BM Units** at the **Connection Site**; and
    - (ii) in the case of an **Affected User** who is an **Interconnector Owner** the MW specified in the **Transmission Entry Capacity** for the **Connection Site**,
  - (b) For each subsequent **Settlement Period** of the **Relevant Interruption** which occurs within the first 24 hours of the **Relevant Interruption**, a sum equal to the **Market Price** as defined in the **Balancing and Settlement Code** for the relevant **Settlement Period(s)**  
multiplied by:
    - (i) in the case of an **Affected User** other than an **Interconnector Owner** the MW arrived at after deducting from the **Transmission Entry Capacity** for the **Connection Site** the sum of the **Connection Entry Capacity** of the unaffected **BM Units** at the **Connection site**; and
    - (ii) in the case of an **Affected User** who is an **Interconnector Owner** the MW specified in the **Transmission Entry Capacity** for the **Connection Site**; and
  - (c) and after the first 24 hours a sum calculated as 1 above
3. In the case of all other **Relevant Interruptions**:
- (a) sum equal to the **System Buy Price** as defined in the **Balancing and Settlement Code** for each **Settlement Period** (or part thereof) from the start of such **Relevant Interruption** until the first **Settlement Period** for which **Gate Closure** had not (at the time the **Relevant Interruption** started) occurred  
Multiplied by:
    - (i) in the case of an **Affected User** other than an **Interconnector Owner** the MW

Section 11 following CMP211 Implementation (24<sup>th</sup> January 2013)

arrived at after deducting from the **Transmission Entry Capacity** for the **Connection Site** the sum of the **Connection Entry Capacity** of the unaffected **BM Units** at the **Connection Site**; and

- (ii) in the case of an **Affected User** who is an **Interconnector Owner** the MW specified in the **Transmission Entry Capacity** for the **Connection Site**
- (b) For each subsequent **Settlement Period** of the **Relevant Interruption** which occurs within the first 24 hours of the **Relevant Interruption**, a sum equal to the **Market Price** as defined in the **Balancing and Settlement Code** for the relevant Settlement Period(s)

multiplied by:

- (i) in the case of an **Affected User** other than an **Interconnector Owner** the MW arrived at after deducting from the **Transmission Entry Capacity** for the **Connection Site** the sum of the **Connection Entry Capacity** of the unaffected **BM Units** at the **Connection site**; and
- (ii) in the case of an **Affected User** who is an **Interconnector Owner** the MW specified in the **Transmission Entry Capacity** for the **Connection Site**; and
- (c) and after the first 24 hours a sum calculated as 1 above.

Provided always that an **Affected User** shall not receive payment for more than one **Relevant Interruption** in any given day;

4. In the event of the relevant **Market Price** being zero then for the purpose of 2(b) or 3(b) the **Market Price** shall be deemed to be the most recent preceding positive price.

**“Interruption Period”**

the period in days commencing with the notification by **The Company** to the **Affected User** of the start of **Relevant Interruption** and ending on the notification by **The Company** the **Affected User** that the **Relevant Interruption** has ended;
