

Electrical Standards for the SHE Transmission System - Summary paper for GCRP meeting on 25/11/15

This paper is provided by SHE Transmission (SHET) to update GCRP members on the status of the review and update of Electrical Standards as applied in our Transmission Owner (TO) area.

Having previously advised our intention to adopt the NG RES in the main, we are now able to present the Relevant Electrical Standards Interface document which covers those areas where SHET wishes to apply specific additional standards criteria.

As previously advised, the transmission system connection differences in the North are primarily driven by geographic location and network characteristics. However, in developing our Standards Interface document we have endeavoured to ensure consistency of approach and to minimise the content of the document.

The SHET Standards Interface document (Ref SP-PS-LT-2060) is now presented for GCRP approval. SHET recognise that changes to the Electrical standards can affect a number of stakeholders, and we will be pleased to receive any comments that GCRP panel representatives or their members may have.
