BSUoS Forecast for Jun-22

Balancing Costs	Forecast for June 2022 is £219 million.
Energy model considerations	The Balancing Costs model uses the patterns of costs historically which are then adjusted for changes in prices, outturn/forecast to create a baseline which can then be projected forward and shaped based on an understand through the year.
	This is significantly lower than the forecast produced in April (£285 million) and March (£401 million), but more produced in February (£222 million). This is due to changes in the price of wholesale electricity in the futures m
	The forecast was produced based on a forward price curve derived on 9th May 2022
	A consistent change in the wholesale electricity forward curve of \pm 20% would lead to a change in central foreca of approximately \pm 12%.
	No new planned or current outages on interconnectors or Western link.
Constraint model considerations	The new constraint forecast (available on the data portal) has been incorporated as an input to model.
Estimated internal BSUoS	Future year costs were adjusted in the April 2022 forecast in line with the latest results of the Annual Iteration I Electricity System Operator (ESO) under the RIIO-2 network price controls, based on the Ofgem republication of "SOIAR" in this spreadsheet shows the allowed revenue for 2022/23 and a forecast for future years. No change since May 2022 forecast.
	<u>https://www.ofgem.gov.uk/publications/republication-riio-gd2-and-riio-eso-price-control-financial-model-following-annual-itera</u>
ALoMCP	 Following discussion at the Steering Group, it was agreed that there was a need for additional activities in this f the Loss of Mains risk reduction that the programme can deliver. Activities include supporting generators to un checks and assurance of compliance declarations. Activities are expected to continue a reduction in costs that t managing the Loss of Mains risk in other ways. These assurance and programme close down activities will run through the 2022-23 financial year (rather than which our provisional forecast had accounted for). As the deadline is August this year we are expecting a last minute push from all DNO's.
	No change since May 2022 forecast.
CMP381 Deferred Costs	There is £43.9m deferred to 2022/23. Cost recovery has been included from 3rd May 2022 as per the approval updated since May 2022 forecast based on the outturn SF data
Estimated BSUoS Volume	The BSUoS volume has been changed to reflect the approved status of CMP308. This is applicable from April 20
BSUoS Reform	This forecast does not currently contain any allowance for the outcome of CMP361/362 whereby charges would ESO. Once further detail is known in regards to the outcome of this process we will update our forecast according to the outcome of this process.
