

The Triads are calculated in accordance with the Statement of Use of System Charging Methodology (See Section 14 of the Connection and Use of System Code.) They are based on the latest settlement data available when the Triad was calculated in March 2015, as illustrated by the run type (SF = Settlement Final; R1 = Reconciliation 1; R2 = Reconciliation 2).

A Triad can occur on any settlement period between the start of November and the end of February.

Monday 19th January 2015 had the highest half hour average demand of 51,276MW between 17:00 and 17:30 and was therefore a Triad. No further Triads could have occurred between 9th and 29th January 2015 inclusive, due to the ten clear day rule.

The next highest half hour average demand of 50,859MW occurred on Monday 2nd February 2015 between 17:30 and 18:00 and was therefore a Triad. No further Triads could have occurred between 23rd January and 12th February 2015 inclusive, due to the ten clear day rule.

The next highest half hour average demand of 49,655MW occurred on Thursday 4 December 2014 between 17:00 and 17:30 and was therefore a Triad.

Date	Day	Half Hour Ending	Settlement Period	Demand	Settlement Run
01-Nov-14	Saturday	18:00	36	36,439	R2
02-Nov-14	Sunday	17:30	35	38,940	R2
